

# Statue Battle

Nathan Curtis

Place the 12 given shapes in the grid so that no two shapes overlap or share an edge, and the squares not contained in any of the shapes form a single connected group. Shapes may be rotated and/or reflected before being placed in the grid. Shaded circles indicate squares which are part of a shape, and white circles indicate squares which are not part of any shape. Additionally, place two stars in each shape so that every row and column of the grid contains exactly two stars, and no two stars are adjacent, even diagonally. Note that there may be more than one way to place the shapes in the grid, but only one way to place the shapes **and** the stars according to the rules.
